SHRUTIK SHASHIKANT KUPEKAR

FULL STACK DEVELOPER
Lancaster, CA | (657) 767-9147 | kupekarshrutik16@gmail.com | Linkedin | GitHub | Portfolio

PROFESSIONAL OVERVIEW

Full Stack Software Engineer with **2+ years of professional software development experience** and an **M.S. in Computer Science** from California State University, Fullerton. Experienced in developing **web applications, RESTful APIs, database-driven systems, and backend services** using **React, Next.js, Node.js, Express.js, Python, SQL, and AWS**. Project experience includes **event-driven data pipelines, distributed systems, serverless applications, and AI integrations** using **LLM and RAG workflows**. Additional experience in **system architecture, technical decision-making, code reviews, and developer mentorship**.

PROFESSIONAL EXPERIENCE

Instructional Lab Assistant | California State University, Fullerton | Fullerton, CA **Aug 2025 – May 2026**
Department of Computer Science

- Supported 150+ CPSC 120/121 students with C++ programming, object-oriented programming, memory management, debugging, and runtime error resolution
- Reviewed 100+ student code submissions while reinforcing programming best practices, algorithmic efficiency, and clean coding standards

Software Developer | SAAA Consultants | Mumbai, India **Jun 2023 – Jul 2024**

- Developed full-stack web applications using React, Node.js, Express.js, and MySQL across 20+ client projects, translating client requirements into functional software solutions
- Built **RESTful APIs** and optimized **SQL** queries and **database** indexing to enhance application data access and performance
- Enhanced website responsiveness and user experience through UI/UX optimization and frontend-backend integration
- Optimized page-load performance by 45% through code splitting, lazy loading, frontend optimization, and efficient API interactions

Software Developer & Technical Lead (Early-Stage Startup) | Fineappl | Mumbai, India **May 2022 – Dec 2022**

- Joined as the startup's first technical employee, establishing foundational system architecture and engineering standards while helping grow the engineering team to 5 members
- Collaborated directly with the **CEO** on **system architecture** and **key technical decisions** for a **mental health** application
- Increased weekly active users (WAU) by 70% through UI/UX improvements, offline-first functionality, and background synchronization
- Contributed developer hiring and mentorship while contributing to code reviews and established engineering best practices

Python Developer Intern | Cyberrace Infovision | Mumbai, India **Mar 2020 – Jun 2020**

- Programmed a Python analytics application using Tkinter and MySQL to visualize, process, and analyze structured datasets
- Automated **data validation** and **transformation workflows**, eliminating 10+ hours of manual processing per week while achieving 99%+ accuracy
- Used MySQL queries to support data processing, analytics, and reporting across structured relational datasets and workflows

TECHNICAL PROJECTS

Serverless AI Chat Application | AWS Lambda, API Gateway, DynamoDB, Next.js, OpenAI API | Link

- Expanded a serverless AI chat application using AWS Lambda, API Gateway, DynamoDB, Next.js, and OpenAI APIs without relying on a traditional always-running server
- Created REST endpoints for sending and retrieving messages, summarizing conversations, and performing automated fact-checking through serverless backend workflows
- Integrated AI-powered summarization and fact-checking to help users review conversations, validate responses, and extract key insights

AI News Intelligence Platform | FastAPI, Apache Kafka, PostgreSQL, pgvector, Redis, Next.js, AWS S3

- Built a distributed news intelligence platform that ingests articles from RSS feeds and APIs, deduplicates content, and clusters related articles into stories using semantic embeddings and PostgreSQL with pgvector
- Designed an event-driven processing pipeline using Kafka, with stages for raw ingestion, normalization, processing, embeddings, story updates, and alerts, supported by dedicated workers
- Implemented Redis caching, AWS S3 storage for raw articles, and WebSocket-based real-time story updates for the frontend
- Strengthened retrieval-augmented generation (RAG) question answering grounded in cited source articles and tested pipeline throughput from 10 to 500 articles per second, with retries, dead-letter queues, and failover mechanisms

EDUCATION

Master of Science (M.S.) in Computer Science | California State University, Fullerton | **GPA:** 3.76 **May 2026**

Bachelor of Engineering (B.E.) in Computer Engineering | Mumbai University, India | **GPA:** 3.20 **May 2022**

TECHNICAL SKILLS

Programming Languages: JavaScript, TypeScript, Python, SQL, C, C++, Java
Frontend: React.js, Next.js, HTML5, CSS3, Bootstrap, Tailwind CSS
Backend & APIs: Node.js, Express.js, REST APIs, FastAPI, Django, Spring Boot
Databases: MySQL, PostgreSQL, MongoDB
Cloud, DevOps & Tools: AWS, Docker, Git, Linux, CI/CD
