Dear Brains & Motion Education Hiring Team,

I am excited to apply for the Program Coordinator position with Brains & Motion Education at Wilsona School District. I recently completed my M.S. in Computer Science from California State University, Fullerton, and I am very interested in this role because it combines education, student support, STEM enrichment, coordination, and hands-on program leadership.

My background includes both technical and teaching experience. I have worked as an Instructional Lab Assistant at California State University, Fullerton, where I supported students with programming concepts, debugging, object-oriented programming, control flow, and problem solving. I have also volunteered as an instructor teaching teenagers web development fundamentals, responsive design, clean coding practices, and hands-on frontend projects. These experiences helped me become more patient, organized, and comfortable explaining technical topics to students with different learning levels.

I also bring strong coordination and communication experience from my professional software development background. At SAAA Consultants, I worked on multiple client projects, communicated with stakeholders, understood requirements, managed priorities, tested my own work, debugged issues, and helped turn ideas into working technical solutions. This experience taught me how to stay organized, solve problems quickly, and work well with both technical and non-technical people.

What excites me about Brains & Motion Education is the opportunity to help students explore STEM, coding, robotics, creativity, and problem solving in a fun and supportive environment. I would be excited to support daily program operations, communicate with instructors and school staff, assist with training, help manage program materials, and step in as an instructor when needed. I believe my combination of computer science knowledge, teaching experience, organization, and willingness to take initiative would allow me to contribute positively to your programs.

Thank you for your time and consideration. I would be grateful for the opportunity to discuss how my background in STEM education, student support, communication, and program coordination can contribute to Brains & Motion Education.

Sincerely,
Shrutik Kupekar
